

mPDF

ChangeLog

=====

mPDF 5.7.1

1/09/2013

=====

1) FILES: mpdf.php

Bug fix; Dollar sign enclosed by <pre> tag causing error.

Test e.g.: <pre>Test \$1.00 Test</pre> <pre>Test \$2.00 Test</pre> <pre>Test \$3.00 Test</pre> <pre>Test \$4.00 Test</pre>

2) FILES: includes/functions.php AND mpdf.php

Changes to preg_replace with /e modifier to use preg_replace_callback

(/e deprecated from PHP 5.5)

3) FILES: classes/barcode.php

Small change to function barcode_c128() which allows ASCII 0 - 31 to be used in C128A e.g. chr(13) in:

<barcode code="54321068" type="C128A" />

4) FILES: mpdf.php

Using \$use_kwt ("keep-[heading]-with-table") if <h4></h4> before table is on 2 lines and pagebreak occurs after first line

the first line is displayed at the bottom of the 2nd page.

Edited so that \$use_kwt only works if the HEADING is only one line. Else ignores (but prints correctly)

5) FILES: mpdf.php

Clearing old temporary files from _MPDF_TEMP_PATH will now ignore "hidden" files e.g. starting with a "." .htaccess, .gitignore etc.

and also leave dummy.txt alone
